

TSVS students go on an industrial visit

Bhopal: Grade 10 students of The Sanskaar Valley School boarding took a geography field trip to 'Prakrit' to explore sericulture. Prakrit is a government centre for silk manufacturing.

The first stop was to learn about silkworm rearing, where the silkworms are cultured. The students came to know about different types of feeds and worms that result in different varieties of silk like mulberry, muga, eri, and tussar. The kids then visited the site where the raw material is processed and converted to fine silk yarn.

The director of Prakrit held an interactive session where he spoke about the nitty-gritty of agro-based industries and how are these industries reaching out to the unemployed rural population. It was an interesting trip organised by Dr. Atrayee Sengupta and accompanied by Somnath Ganguly.
